Problem 1. Write problem here.

Solution. Write solution here.

$$f(d) = \sum_{d|n}^{N} \mu(d) g(\frac{n}{d})$$

That's the basic form of Mobius inversion.Now let's see another form of Mobius inversion.

$$f(n) = \sum_{d|n}^{n} \mu(d) g(\frac{n}{d})$$

That's the second form of Mobius inversion.

Note of Problem 1. Write note here.
